

1 PONTOS HIDRAULICOS — TERREO
ESCALA 1:100

2 PONTOS HIDRAULICOS — SUPERIOR
ESCALA 1:100

DIMENSIONAMENTO — AGUA FRIA E ESGOTO

TRECHO	PECAS	PESOS	Q (L/s)	DN AGUA	V (m/s)	UMC	DN ESGOTO	REGIME
Superior	8	2.10	0.435	DN25	1.19	27	DN100	pressurizado
Terreo	9	4.80	0.884	DN25	1.81	38	DN100	gravidade
GERAL	18	7.00	0.794	DN32	1.31	33	DN100	gravidade

DECISOES QUE O DIAMETRO REVELA

DECISAO	CONSEQUENCIA HIDRAULICA
Chuveiro eletrico em vez de aquecimento central	peso 0.02 por chuveiro em vez de 0.40 a soma cai de 8.2 para 7.0 pesos e o alimentador de DN60 para DN52
Limite de velocidade por conforto, nao por norma	DN25 elevando a soma a 2.07 m/s a 3.0 m/s e tudo nao bascula. Custa alguns metros de tubo
Pressurizador no ramal superior	0.5 mca por gravidade nos setores chuveiro eletrico, TC-14 entrega 12 mca
Ramais pluviais sem ligacao a valas	rede de rede e flocamento separada, com cot e identificacao proprio, nao ha ponto de conexao cruzada possivel
Canal de goteira antes da inspecao	costuma > TC-11 [DN-11] > TC-12 < rede, DN100 com cobertura de 2 m

NOTAS

- Agua fria por metrado dos pesos (DN50) Q = 0.20 e vazante dos pesos = 0.794 L/s com 7.0 pesos.
- Alimentador DN62 a 1.12 m/s — limitado pelo conforto (2.0 m/s) nao pela norma (3.0 m/s).
- Exigido por UMC (DN50) 33 UMC, tubo de queda DN100, ventilacao DN60.
- Chuveiro 0.6 L/seg com peso 0.10, nos 0.40 a decisao de aquecimento requerer agua quente diametro menor em toda a casa.
